The detaching top roller cover for the modern combing machine

In collaboration with quality-orientated spinning mills BERKOL® has developed the top roller cover for fast running combing machines.

 **BERKOL®**

More than just Rubber

The quality HA65S brown, 67 Shore A

It is distinguished by:

- very low tendency to lap
- good nipping of the fibre tuft
- minimal coating formation
- extended grinding intervals
- high resistance to ozone and oil
- excellent running properties

The advantages for the spinning mill are obvious:

- reduction in machine downtime caused by laps by up to 30%
- 5 to 7% higher efficiency on the combing machine
- improved quality of the combed sliver
- fewer problems with subsequent processing
- growth in production
- cost reduction

The quality HA65S brown is available as Alupress and in the glued version in all the main detaching roller sizes.

Because of the excellent results many spinning mills have replaced their detaching top roller covers with **BERKOL® HA65S brown**. BERKOL® is a supplier to the leading combing machine manufacturers.

Why don't you give it a try too?
